

CONGRESS BROCHURE

Congress, Conference & Exhibition

12 - 14 June 2018

AVI Africa

PREDICTABLE UNIFORMITY

Value to your business

Best uniformity matters

- Consistent product weight ranges
- Efficient processing performance
- Best uniform 'as hatched' broilers
- Higher yield value
- Reduced product 'downgrade'
- Increased profits

FOREWORD

Welcome to Avi Africa 2018. It is with the greatest honour that we welcome all to this year's congress. We know that as always, you travelled from far and wide to join us again this year. The congress continues to be a great success owing to your continued support. A special welcome to the exhibitors, both old and new, without whom this event would not be possible.

Coming out of a very difficult 2017, we have themed this year's congress "Overcoming the

unexpected". We believe that last year were caught off-guard by some sizeable events.

The Avian Influenza outbreaks were the most devastating of the events. This year we have included several Avian Influenza topics to be delivered by both local and global experts. We hope that these sessions will improve our knowledge multiple folds.

Who can forget the mayhem caused by the listeriosis outbreak and the subsequent unfortunate loss of lives. It was prudent that

listeriosis becomes one of the key topics for this year's congress. The topics range from the disease itself, how to find it and also how reduce the levels in the production systems. Additionally, a topic on product recall and the responsibility of the producers is included.

As is tradition, the congress retains the three thematic areas for the parallel session. The areas are economics, production and technical themes. We also dedicated a session to small scale farmers

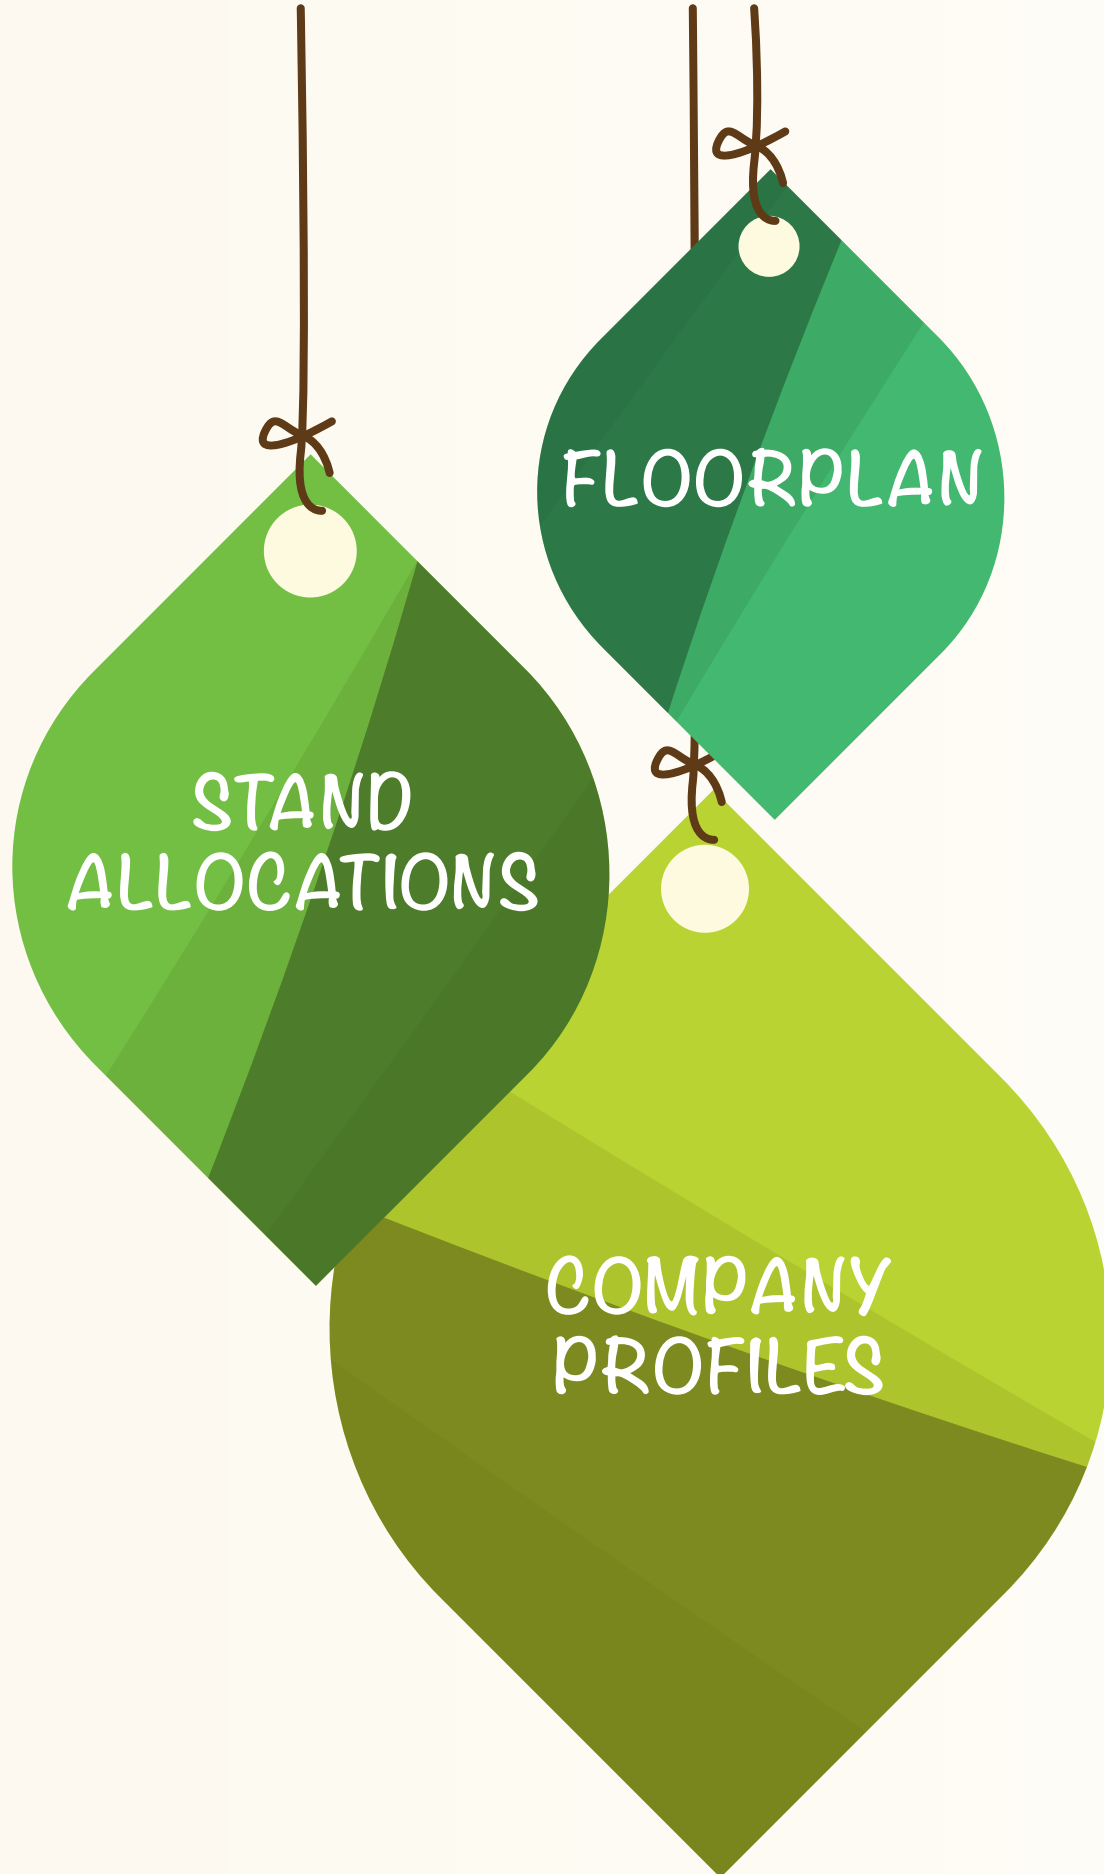

Thank you again for attending the congress

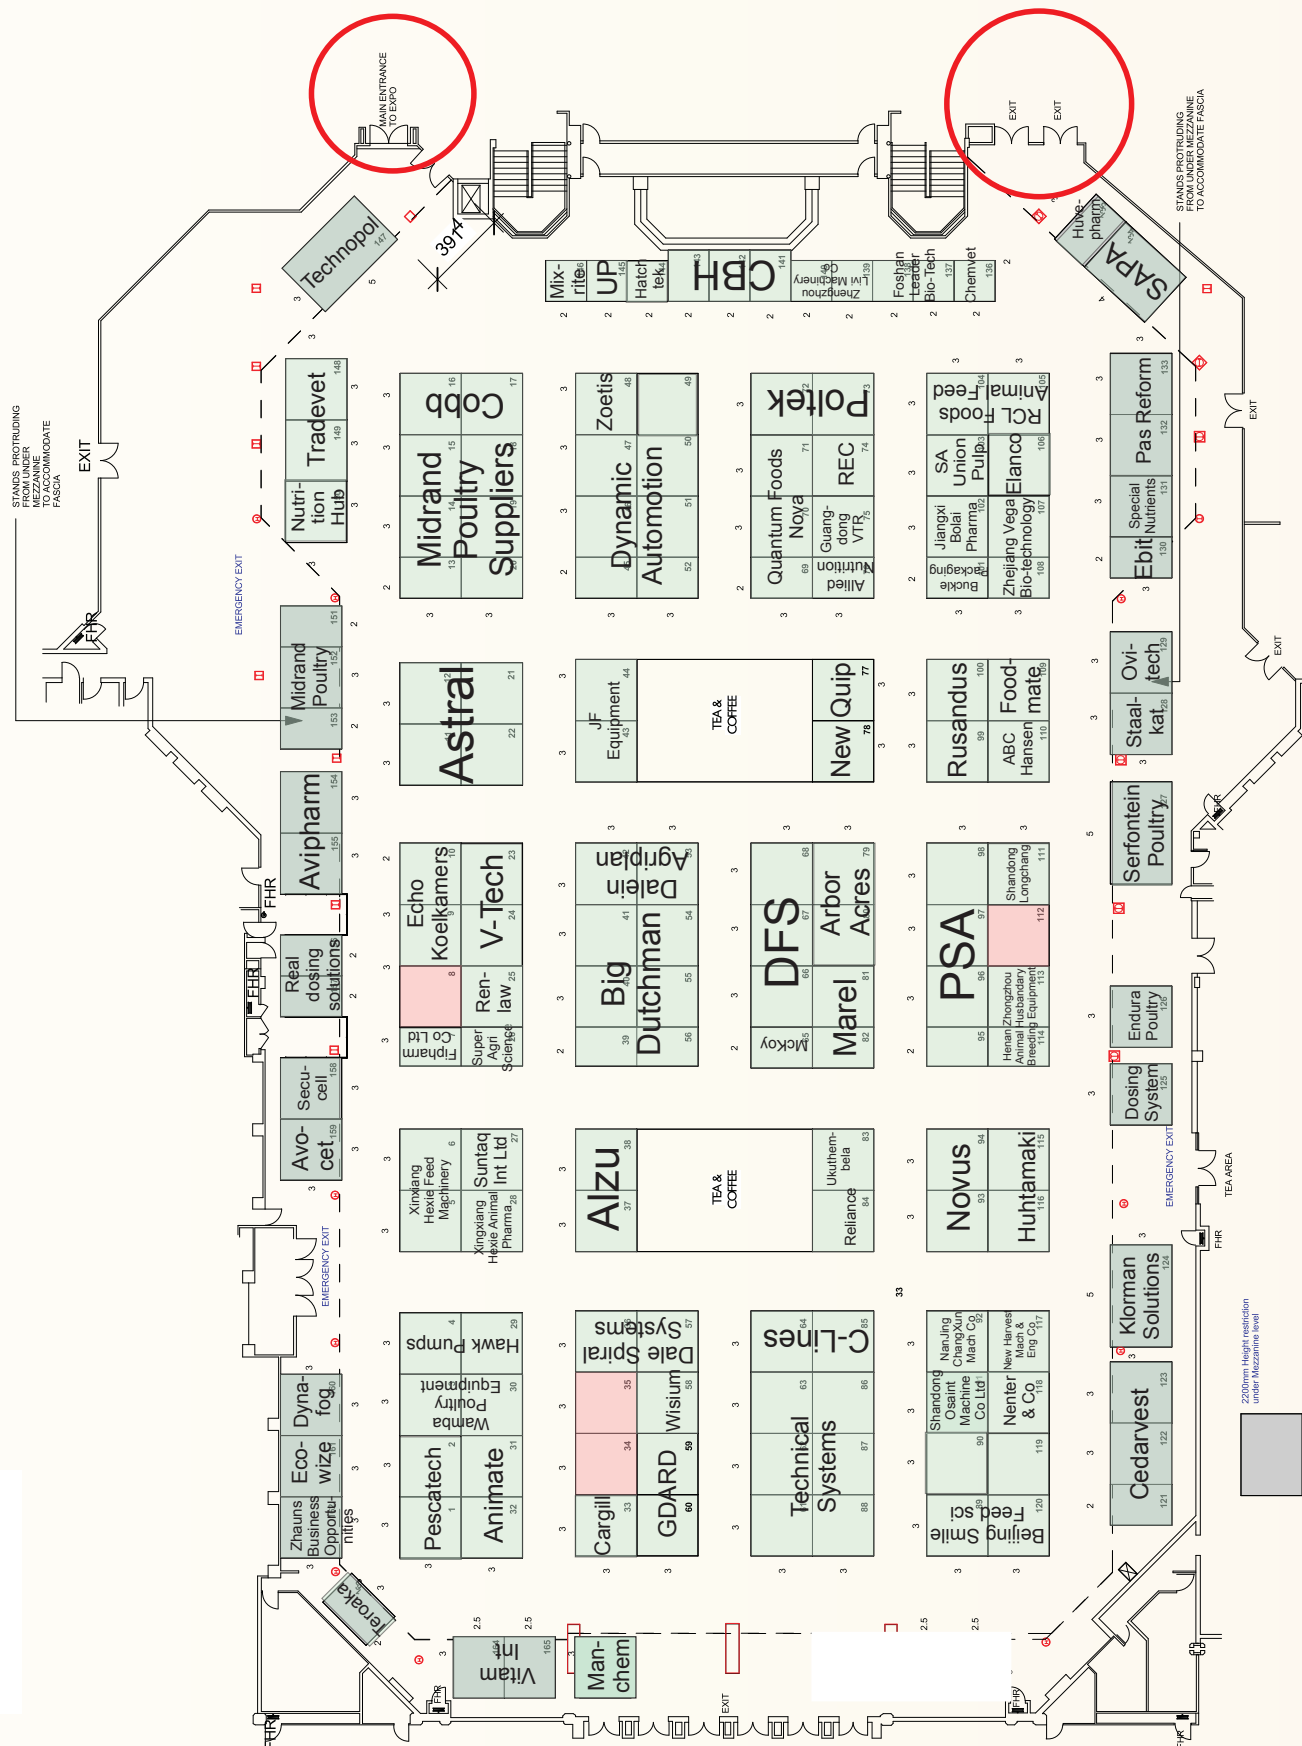

and we are certain that you will derive immense value for your business. We encourage you to use the opportunity to interact with potential clients as well as colleagues. Please visit the exhibitions hall to get up to date with the advances in technology that the companies continuously present at the congress.

Welcome and enjoy Avi Africa 2018.

Small Footprint Big Impact.

Kindest Regards
Dr Charlotte Nkuna
Interim CEO- SAPA

ABC Hansen was established in the mid 1990's as manufacturer and supplier of post-harvest processing equipment with emphasis on grain handling, cleaning, drying and storage as well as milling of grain for feed, fine milling and oil seeds processing.

This has led to many areas in between and equipment for special applications where there either did not exist appropriate equipment or where local manufacture enabled it to be most cost competitive.

The company is partly owned by ABC Hansen of Denmark and projects are often the result of South African, Danish / European, American, Turkish and other internationally known collaborators' efforts. It operates from premises in Pretoria, South Africa and exports throughout the African continent as well as to Europe and the Americas.

Check weighing

Mechanical Tip-scales are imported and distributed as part of poultry, piggery and other feeding solutions and is often used as bagging scales with ABC Hansen's additional equipment. Bins are placed on load cells, electronic batch weighing and platform scales as well as weigh bridges form part of the ABC Hansen range of products for mass measuring.

Processing equipment

A range of the well-known Hippo hammer mills – from 2.2kW to 110kW mills need no introduction as it has been around since 1928 in South Africa. The same cast iron quality is still manufactured with many new additions from streamlined intake to dust free operation.

A range of mixers, from low cost vertical mixers to high capacity horizontal paddle mixers are manufactured in-house with all accessories such as bucket elevators and screw conveyors.

Pellet machines from mini feed mill plant 7.5kW to a range of Italian precision pellet mills in excess of 500kW are supplied as part of turnkey solutions.

Extruders and expellers as well as roasters for soy bean processing is part of the ABC Hansen program together with vegetable oil refining.

Project management and consulting

Project management saves or fails any turnkey project and ABC Hansen undertakes the following services as part of its obligation under any project:

Engineering, drawings, project management, finance, civil works, supply and integration of equipment, electric controls and automation, installation and commissioning.

Silos

Silos and feed bins are supplied and installed together with its conveying systems for all bins from 1 ton to 15,000 tons per bin, to include intake, elevators, conveyors, aeration, fumigation, drying, cleaning, storage and of course civil works, electric controls and automation, installation and commissioning.

Do not embark on such a project without referring to the guide "How to plan a silo Project" available free from the website abchansenafrica.co.za. A complete layout is furnished to the buyer with order.

PIC is the international leader in the provision of continuous genetic improvement in pig breeding stock and in world class technical support to the global pork supply chain.

As a franchise of PIC International, PIC South Africa produces and multiplies superior PIC boars and gilt products in South Africa and Africa as a whole. PIC combines quantitative analytics with leading-edge biotechnology to develop breeding stock that helps our customers maximize profitability. The company, a division of Genus plc and founded in 1962, operates in 30 countries on 6 continents. Our PIC genetic products and breeding programs are tailored to meet the individual needs of our customers. All our farms are Pork 360 accredited, meeting all standards in terms of bio-security, health, hygiene and animal welfare and to remain compliant, independent audits are conducted on a regular basis at each farm. Our farms are certified as export compartments and comply to SAPPO's compartmentalization initiative.

Animate
Animal Health

At Animate we continuously strive to achieve our goal of providing in-feed additive and other solutions through a carefully developed or sourced product range. This philosophy enables us to make a difference and add real value to the intensive animal health, production and feed industry.

We also strive to continuously improve our service as well as our range of products and solutions that we offer. We are dedicated to being of service to the animal food production chain by assisting livestock producers, feed manufacturers, integrators and veterinarians in improving the performance of their products.

We constantly strive for maximum competitiveness and differentiation in every facet of this industry.

The auditing of all Animate's suppliers worldwide, which amongst others are certified by GMP (Good Manufacturing Practices), GLP (Good Laboratory Practices) and ISO (International Organisation for Standardisation) guidelines, enables us to meet the highest quality standards. This ensures quality control throughout all stages of the services that Animate provides, i.e. research and development, the manufacturing and supplying of raw active materials and feed additive products.

Each product batch is manufactured to exact specifications that underscore the benchmark for our range of registered products.

Arbor Acres Plus was introduced to the South African Poultry Industry in June 2006, after Arbor Acres South Africa (Pty) Ltd secured a contract from Aviagen to become the sole supplier of the Arbor Acres Plus parent stock to the broiler/breeder market in South Africa. We at Arbor Acres South Africa, provide our customers with technical support, training of personnel, nutritionist and veterinary advice as well as access to the latest biological technology e.g. thermal image of poultry, ventilation and smoke testing.

As one of the core Aviagen brands, product development is firmly focused on meeting the current and future needs of the global market. Arbor Acres products have been developed to serve the multiple demands of markets throughout South Africa.

The popularity and success of Arbor Acres has been on the rise and further performance increases will be witnessed in years to come.

With headquarters in Johannesburg, Avocet Scales and Labels (Pty) Ltd, have been a respected specialist in the weighing and labelling industry for over 17 years. Avocet Scales and Labels are the sole distributors of the Ishida range of weighing equipment and provides exceptional sales and services of Electronic

Scales, Industrial Platforms, TSC Thermal Printers, State of the Art Software Systems, Self Adhesive Labels and consumables in both the Retail and Food Processing Industries. Our foot print not only covers the whole of South Africa, through our nine strategically based branches but also partnering with many distribution channels throughout sub-Saharan Africa.

As a solely South African owned B-BBEE Level 5 Company, Avocet continues to grow, attaining market share through its strong technical abilities including a 24Hr Help Desk, Research and Development, high quality weighing equipment and offering full on-site Preventative Maintenance, Service and Repair Services with our main goal in putting our customers first.

Housed within our Head Quarters are our National Stores (warehouse) and large Label Manufacturing Plant producing Self Adhesive Label Rolls used for our Electronic Printing Scales and Thermal / Non Thermal Label Printers.

Avocet Scales and Labels, established in 2001, have gained comprehensive knowledge in providing our customers an in-depth understanding on multiple weighing solutions thus enhancing our capability of handling all customer needs. Our technical staff who are certified verification officers, equipped with technical training, hardware and software, correct tools for the job and practical onsite experience offer all our customers high levels of service.

Avocet Scales and Labels are equipped with 9 (nine) Verification Laboratories, (Johannesburg North, Johannesburg South, Bloemfontein, Polokwane, Nelspruit, Durban, East London, Port Elizabeth, Cape Town) LTF 0249 with in each branch and have a team of over 40 fully trained verification officers contracted to the National Regulator of Compulsory Specifications (NRCS) will assist you with advise to meet any compliance objectives.

Avocet is a SANAS accredited Scale Verification Laboratory and designated by the National Regulator of Compulsory Specification (NRCS), with the ability to verify any approved electronic weighing device within a capacity range between 3kg and 1500kg as is a legal requirement.

At Avocet Scales and Labels we are continually developing our products, knowledge and services and adding value to the market needs thus offering innovating solutions to an ever fast changing market and ultimately reducing costs where possible.

Quality Products and Service are Avocets motto with

focus on our customers who ultimately always come first.

SF (Beijing Smile Feed) was founded by the scientists from Chinese Academy of Agricultural Sciences (CAAS) in 1999, which is the major suppliers of feed enzymes, probiotics, betaine & animal healthcare products in China.

BSF now owns 3 factories with annual production capacity for 20,000 MT feed enzymes, 30,000 MT probiotics and 60,000 MT betaine products.

Our version is "Rising from the animal husbandry industry, and to be the world leading bio-products supplier." We share our value with best quality products and thorough technical service to worldwide feed industry.

Hope to be your professional supplier of feed enzymes, probiotics & betaine products.

Big Dutchman South Africa has been servicing the Poultry industry in South Africa since 1966. Our wide ranges of products and expertise have contributed the success of our company as well as that of our customers.

We pride ourselves as the market leaders in poultry equipment both internationally and locally here in South Africa.

Our product range includes the following:

Broiler: The Big Pan Feeder, Sanistar Nipple Drinker and superior Ventilation System proven to be the winning broiler production combination. We also offer Broiler Cages – for broiler growing for maximizing stocking densities per building and simplifying labour by means of the transit system which is used for bird removal.

Breeders: The Champion Chain Feeding System, a trademark of our organization, is still the leading feeding system for breeders worldwide.

The Repromatic Fluxx Breeder Pan Feeding System provides the advantages of both Chain and Pan Feeding System when facilitating management in restrictive feeding and delivering feed rapidly with no feed wastage. The High-Flow Top Nipple Drinking System, suited for heavier birds and delivering flow rates of up to 100ml/minute, complements our breeder package.

Layers: The Big Dutchman Automatic Cage System, offer both the A-Frame Cages, being Super Triple Deck and Super Double Deck Cage Systems, as well as the Belt Battery Cages for Pullet Rearing and Commercial Layers, being the Univent Starter and Univent Layer Cages, have always been at the forefront of cage automation. We offer a series of manual nest boxes, Colony Automatic Nest Boxes and Natura Aviary Systems for free range, Barn Egg and Organic Egg production.

Ventilation: With our expertise and wide range of ventilation products, allow us to design a Viper / Big FarmNet system which suits your pocket and maximizes your performance, from fully environmental control to semi-environmental control. We also provide a range of circulation fans and automated winches for curtain systems on curtain ventilated buildings.

Feed Mills : BDW offering our range of feed milling equipment (from 1 ton/hr to 100 ton per hour) from farm systems 1 ton – 10 ton/hr to industrial systems 20 ton – 100 ton/hr.

Visit our website www.bigdutchman.co.za for more details. We look forward to seeing you at our stand.

Established in 1979, Buckle Packaging (Pty) Ltd has offered the Southern African market with a comprehensive range of 'end of line' packaging equipment. We are able to offer quality stainless steel SAXON "hot air" continuous heat sealers to seal IQF bags, as well as FISCHBEIN "sealed in oil" bag stitching machines to close WPP bags.

We are the sole agents for this equipment, specializing in the closure of woven and non-woven bags for the past 39 years, and are able to offer sales through to spares and support.

Buckle Packaging offers a unique operation, and are the market leaders in heat sealing and bag stitching machinery locally, offering a large stock holding of spare

parts as well as our premium polyester bag closing thread.

The SAXON range of "hot air" sealers is ideally suited for sealing poultry products, as is the FISCHBEIN range of bag stitching machinery.

Cargill's animal nutrition business will showcase its range of micro nutrition products under its Provimi brand, and share the latest insights about relevant topics in the poultry industry, such as gut health, AGP-free, mycotoxin risks, as well as the importance of antioxidants, at Stand 33 at AVI Africa 2018.

Poultry producers face global pressure to reduce the reliance on antibiotics. Cargill has developed Intella™FIT and Intella™FIT Plus (previously Biacid), a special additive blend of stabilized essential oil compounds and organic acids, selected for their beneficial effects on digestive function and gut microflora balance.

Experts will be present to explain how Intella™FIT promotes enhanced feed efficiency and growth rate in poultry, whilst helping to reduce the reliance on antibiotics.

Cargill will also focus on their range of mycotoxin binders that helps to control mycotoxin risks. This includes Notox™ LS, a broad-spectrum mycotoxin binder that has been proven to successfully bind a wide spectrum of mycotoxins.

Our experts will show you our unique tool, which provides fast analysis, and helps you understand the prevalence of mycotoxins and their impact on your animal.

Cargill developed Proviox™ 50, a unique antioxidant blend for broilers, breeders and layers with partial replacement of Vitamin E. Cargill experts will be on hand to discuss the benefits of Proviox™ 50.

C-Lines, a French company known as a leader in prefabricated poultry housing offers an innovative concept, flexible and adaptable with a complete service from the design stage to fully completed building.

Since C-Lines designs, engineers and manufactures its own buildings, we are in a unique position to customize structures to fit specific client requirements and successfully operate in any geographic location.

All our buildings are designed and constructed for the long term which helps the customer to realize a maximum return on his investment.

Our experience has led projects in over 60 countries.

C-Lines guarantees to give you the best and most efficient design for the location of the project, wherever it may be..

C-Lines the fastest lane to implement your projects.

C-lines concept it's more birds / m², a better effectiveness of your ventilation and less days to achieve market weight.

Our pre-engineered buildings greatly reduce construction time.

Your return on investment is greatly increased over any local construction because our buildings produce more.

Quality raw materials

- Galvanized frame in C Profile, 100% bolted.
- Fondafast: quick and simple anchors system.
- Effective insulation of the building with sandwich panels for walls & gables, fiberglass kraft coated IBR type for roofing, insulated doors, pad-cooling corridor.

C-Lines guarantees a building with a high insulation value combined with air tightness.

Optimised cost

Buildings are manufactured in your area.

- Reduced installation cost :
- 1 standard building of 1000 m² = 14 working days

with a team of 4 people.

Easily cleaned and disinfected

- 100% clear span and clear frame.
- Respect for environmental impact.
- Adaptable C-Lines pre engineered the building according to your equipment specifications.

The Cobb 500 breed remains the breed of choice in South Africa, as it is in most countries around the world. Cobb 500 has proved that it is the most efficient producer of broiler meat with the best yield at the processing plant in South Africa.

Cobb is celebrating 102 years of supply to the world market this year. From modest beginnings in 1916 Cobb has grown to the World market leader in the supply of Broiler breeding stock.

Cobb 500 broilers are readily available from numerous day old chick suppliers in South Africa.

Cobb South Africa is renowned for supplying high quality and large volume chicks that are free of major diseases with unparalleled technical service by well trained and experienced staff.

The Cobb parent and broiler also have the following advantages for chicken producers.

- Easy management
- High hatchability and lowest cost chick producer
- Low mortality
- High levels of feed efficiencies
- Excellent growth rate
- Uniformity on the line
- Superior fertility and hatchability
- Increased chick production
- Consistency and predictability of results
- Lowest cost of producing meat

Cobb South Africa and our partners are proud of the

performance of the Cobb breed.

Come to our stand and discuss your breed requirements with us, and while you there, meet our technical department's advisors.

Theo Bezuidenhout
Sales & Technical Services Manager
Cobb SA

CBH Holdings is a fully integrated poultry business that was acquired by Kevin James in 2003. Today CBH has well established brands including Ross and Arbor Acres broiler genetics, Nutrifeds animal feeds and nutrition and Supreme Chicken consumer brand.

The South African CBH operation has grown more than six fold in the past 13 years and today farms, grows and processes 1.5 million broilers per week.

We at CBH aspire to be the best poultry company in Africa, driven by a strong culture of teamwork, excellence throughout the supply chain and acknowledgment that our people, our biggest asset, drive the company strategy.

CBH is committed to building value via brands with an emphasis on the Supreme Chicken offerings. Additionally we instill a consumer centric focus and have a passion for providing excellent customer service to our retail, wholesale and foodservice partners.

The company continues to expand into Africa with substantial investments in genetics, hatcheries, broiler farming, feed milling, broiler processing, table eggs and quick service restaurants (QSR) in Botswana, Zambia, Swaziland, Zimbabwe, Mozambique, the DCR and Nigeria.

Serfontein poultry, proud suppliers of Dekalb Amberlink, Dekalb Brown and Dekalb White pullets.

The key to our success is the extended laying cycle adopted in our breeding program.

With this approach our laying hens lay more top-quality eggs for an extended period, leading to:

- Stronger and happier laying hens
- A prolonged life for each hen
- Less frequent replacements
- A more sustainable production in total
- Higher earnings for producers

This sustainable strategy benefits the birds, egg producers, and the environment.

We are committed to delivering better breeding today, for a brighter life tomorrow.

Please visit our stand at AVI Africa 2018 to meet the team and learn more about Dekalb.

Dyna Fog Africa is the leading experts of fogging and misting equipment in the African market for more than 10 years.

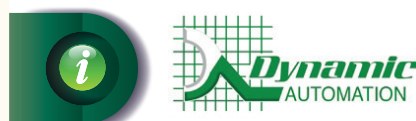

Our ULV Misting (Cold Fog) and Thermal Fogging (Hot Fog) machines are extensively used in the poultry industry for pest control, disinfection, sanitation, cleaning, Aspergillus fumigatus control and vaccination. Our chemical products are unique and specifically formulated for the use with our machines to address the requirements of the poultry industry.

Our solutions offer a faster and more effective method of application for the final Disinfection and Sanitation. Dyna Fog systems also offer an effective control of Litter Beetle and its larvae in chicken houses with turn around time of approximately 10 minutes per house.

For hatcheries, Dyna Fog developed an advanced system for the control of Aspergillus fumigatus in the air. This system is cost efficient, has ease of application and unparalleled efficacy.

Dyna Fog Africa is committed to assist the poultry industry.

Dynamic Automation has served the poultry Industry in South Africa and many other countries for over 31 years. Founder and owner Robert Galway has over 50 years hands on experience in the Poultry industry.

Laying Battery Cage Systems: From fully automated, to much simpler manual systems.

3 Tier vertical belt cleanout, 4 tier vertical belt cleanout
 5 Tier vertical belt cleanout, 6 Tier vertical belt cleanout

Rearing cage Systems:

0–5 weeks , 5–18 weeks

0–18 weeks Full term rearing system

0–18 weeks Simple cost effective manual system – add on units

Breeder Cages:

New innovative concept in commercial layer breeding cages (Vertical belt clean out).

Broiler Cages:

New innovative concept in broiler production from the smaller farmer through to commercial producers.

Steel Structures:

Top quality steel structures to our customers' specific requirements. This helps in delivering the project more cost effectively.

Projects:

Dynamic Automation will assist with the design, layout and equipment requirements to make your project cost effective.

Ventilation:

Dynamic Automation will assist customers in the supply and design of fully controlled ventilation system.

Agencies:

Dynamic Automation are the agents for:

TPI: Complete range of inlets

Termotecnica Pericoli: Complete range of ventilation systems.

SKA: Automatic nests, breeder feeding systems.

Lubing drinking systems: World renowned top quality drinking systems, misting and pad cool systems.

Alke Heaters: Wide range of high end heating systems

Landmeco: Commercial Broiler feeding system

Stienen: Climate control

EPOL, een van die voorste diervoerervaardigers in Suid-Afrika, strewe na topgehalte voer en diens om die volle genetiese potensiaal van diere te verwesenlik en wins op die plaas te maksimaliseer.

Met 'n reeks spesifiek-geformuleerde pluimveevoere om aan die behoeftes van die onderskeie produksiestelsels vir braaikuikens en lêhoenders te voldoen, verseker EPOL 'n perfekte balans tussen prestasie en winsgewendheid. EPOL se uitgebreide produkreeks vir braaikuikens sluit in: Pre-Starter; Grower; Finisher en Post Finisher.

EPOL het ook die ideale proteïenprofiel vir lêhoenders ontwikkel met die korrekte verhouding tot energie sodat die optimale teikenliggaamsgewig en eenvormigheid vir ouderdom behaal word. Derhalwe word die voer só geformuleer om die doeltreffendheid van die hennet vir eierproduksie (voer-tot-eier-omset) en gewig van die eiers te verhoog vir maksimum wins op die plaas.

Produkte sluit in: Sure-Lay Starter, Sure-Lay Grower en Epol Pullet Developer.

EPOL-produkte is landswyd, asook in buurlande, by kleinhandelaars beskikbaar.

Foodmate is a young and dynamic company. Our core business is manufacturing compact cut-up and deboning systems for the poultry processing industry. Besides "standard" cut-up requirements Foodmate is the only supplier in the market who develops custom-made solutions for the industry. This means that we are practically able to cut a chicken in every way. Also in the so called "Fast Food" industry Foodmate is a very strong suppliers. For a South Korean customer we developed for a very large Fast Food chicken chain a cut-up line to cut a whole chicken into 25 pieces.

This chicken is very small sized (max. 1000 gr) and very precise cutting is needed. Foodmate is also your partner for turnkey projects from 500 till 9000 birds per hour, from arrival till deboning area. Our mission is to innovate, automate and bring cost-effective solutions to the industry.

Huhtamaki SA (Pty) Ltd is pleased to announce participation at this year's Avi Africa exhibition. The role that moulded-fibre egg packaging plays has become more and more important over the past years, as the major part of the buying decisions at the supermarket are being made at the point of purchase.

On top of that, the number of egg brands has grown and egg producers need to find new ways to differentiate.

Moulded-fibre egg packaging products have become a key element in the producers' and retailers' marketing mix and Huhtamaki is committed to Helping its customers sell more, by developing egg-packaging solutions that offer the best possible platform to get their valuable egg products delivered, promoted and sold.

We help boost our customers' sales by developing packages that grab consumers' immediate attention and get the best positioning on the shop shelf with new colours, high-quality printing and labelling.

Our customers can tailor each carton to deliver their key message, to enhance their branding and still, and as always, give the most cost-effective protection to their eggs.

We look forward to helping you sell more!

Ask Manchem to design, test and optimize your biocides as well as formulate your industrial, agricultural, waste and water treatment products. Biosecurity, used mainly in veterinary, animal and water and waste industries, is a set of preventive measures designed to reduce the risk of transmission of infectious diseases, quarantined pests, invasive alien species and living modified organisms. These preventative measures are a combination of systems and practices put into place at legitimate bioscience laboratories to prevent the spread of dangerous pathogens and toxins in natural and managed environments.

Components of a biosecurity program include:

- Physical security
- Personnel security
- Material control & accountability
- Transport security
- Information security
- Program management

Based on the above, Manchem can offer you:

- Diseases identification
- Swab hygiene checks
- Disinfectant testing and dilution checks
- Monthly audits
- Forensic trouble shooting
- Formulation of customized products
- Monitoring of genetic resistance in bacteria
- Regular servicing of cooling towers, boilers and effluent dams

Manchem is an independent biosecurity consulting and chemical manufacturing company.

The Manchem team incorporates a formulation chemist, biochemist, forensic chemist and microbiologist specializing in the design, testing and optimization of biocides as well as the formulation of chemical products. Since 1998 the founding members were included in poultry farming on a large scale, both breeding and laying farms. During this time they became aware of the importance of biosecurity in intensive farming operations. As a result of their experience in chemical research, they started to investigate the composition of existing poultry disinfections and the efficiency thereof. They identified the need for a new range of effective broad spectrum disinfectants as it became clear that a

lot of pathogens were resistant to existing products. Consequently, they developed a new range of poultry disinfectants in conjunction with the laboratory of a major chicken producer. During subsequent travels in Africa, they found a substantial need for formulating chemists, with the ability to solve problems, to design and manufacture tailor made products. In the past 10 years the company has become known for its problem-solving, quality products coupled with respect for its research capabilities.

Aim

To provide industry with cost effective, high quality products and practical solutions to problems thereby enhancing its ability to succeed.

Quality Standards

Manchem continuously strives for excellence in all aspects of operation providing consistent good quality products and expert timeous after sales service. We are a certified ISO 9001:2008 company and all products used in the food industry carry the SABS mark. As part of our extensive quality control program the biocidal properties of every batch of disinfectant are screened. All disinfectants are Act 29 registered with NRCS and where appropriate specialized products are Act 36 registered as required by the Dept. of Agriculture.

Nenter & Co., Inc. is a wholly-owned subsidiary of a listed company named Guanfu joint stock company (stock code: 002102). The company was founded in 2006, and the registered capital is RMB 220 million. Currently, we have more than 1000 employees and 3 production plants, which covers approximately 139 acres in total, located in different places in Jingzhou. Nenter is an enterprise producing, developing, and selling medical intermediates and fine chemical products. In order to guarantee the quality of our products we built up quality management system according to Drug GMP step by step, and up to now, we've obtained certificates of ISO9001:2008, PMDA, USFDA (serial number: 030521), and FAMI-QS.

www.nenter.com.cn

New Harvest Machinery and Engineering Co.,Ltd is professionally in manufacturing and supplying of grain cleaning and drying machiner, feed machinery and complete turnkey feed mill plant from designing, producing and installation as well as spare parts supplying.

Powered by our highly-competitive technology development and management team and the strict quality control and assurance system, we provide our customers with high quality products and aftersales service, which include but are not limited to:

1. Feed Processing Machinery such as Hammer Mill, Pellet Mill, Cooler, etc.
2. Turn-key Projects of feed plant.
3. Spare Parts for Feed Processing Machinery.
- 4.

Our products are widely applied in various fields such as grain, feed, husbandry, aquaculture farm, microbial compound fertilizer and environment friendly industry and occupy the market in Philippines, Indonesia, Bangladesh and Africa countries.

New Harvest has passed ISO9001 quality certification

system.

We will keep following the principle of technological innovation, refined management, continuous improvement, customer satisfaction to provide our customers with high quality products and services.

Newquip is supported by more than 30 international manufactures with world leading technology and more than 1200 employers. Each with own in-house R&D to make sure we are leaders with equipment.

What's "new" at Newquip stand this year? Take a look at our latest hatchery equipment, with leading edge technology. We will also be exhibiting the new and improved Zucami cages, yes that's right Zucami is back...

Housing systems

- CAGES for broilers, rearing and commercial production.
- Broiler Pan feeding.
- Breeder feeding systems.
- Male pan feeders.
- Bulk feed storage (silos)
- Nipple drinkers.
- Full range of fans from 20cm to 54 inch.
- Cooling systems (HP nozzle cooling and pad cooling).
- Climate controllers, management system/software and solutions.
- Direct fired heaters available in gas, paraffin or diesel.

Hatchery equipment

- Turnkey solutions for new hatcheries.
- Incubator spare parts (most makes and ranges available).
- Incubator servicing.
- Temperature and Humidity equipment and control systems.
- Full range of setter trays, hatcher baskets, egg crates and chick boxes (for ALL makes of machines).

Nutritionhub offers precision farming systems and functional nutrients to the poultry production and feed industry:

- Smart Farm Assistant is an intuitive management tool for the poultry industry, based on scientific self-learning algorithms, using your enterprise data to further improve and optimize the production and business process.
- Nutrase Xyla is a unique bacterial endo-xylanase with special butyric acid producing capacity, that simultaneously improve digestibility of corn- and soy-based diets for poultry, whilst improving their GIT absorption capacity.
- Farmatan combines hydrolysable tannins and butyrate in a micro-encapsulated form to help prevent clostridia problems in an environmental sustainable way.

We collaborate with leading suppliers, in supplying comprehensive nutritional services, to address the nutritional challenges of our clients to help achieve unique feed formulation and manufacturing goals, optimize feeding management strategies, and work towards Best Management and Responsible Nutrition Practices (Enzymes, Myco- and Endotoxin binders, Acidifiers, water-administrable nutrients, immune modulators, prebiotics and Tannins).

Ovitech CC are the agents in Southern Africa for the Sanovo/Staalkat egg-grading/handling and processing equipment.

Sanovo/Staalkat is regarded as the market leader in egg-handling and processing equipment.

Ovitech CC manufactures the Egg-Wizz pulp machine which is used throughout Southern Africa. Ovitech CC is a well-respected service provider in the poultry industry.

PSA Livestock Equipment, trading as PPA, eagerly awaits the 2017 AVI Africa show as another ideal opportunity to meet and interact with all our valuable customers and industry partners in South Africa and also from many other African regions. Since the ownership change of our organisation and our successful business restructures, PPA is now optimally geared to serve and support our customers.

This year will be especially exiting for PPA, in association with Skov A/S, as we will be launching the all new Skov Blue Fan at the show and will have a full working unit on our stand. The blue fan has been tested as the best and most efficient fan in the world (BESS Lab Test available).

The PPA team proudly continues to offer state of the art products and concepts in Broiler Houses, as well as for Breeders, Layer and Rearing operations, each of which deliver outstanding results and most often tops the production results when compared with other equipment packages.

PPA supplies a wide range of products and equipment for use in the poultry production applications, specifically **Plasson** drinking and feedings systems, **SKOV** for a comprehensive and advanced solution of environmental and ventilation equipment, solutions for cage and egg handling systems and also **Nestomatic** for automatic breeder nests, to mention only a few.

PPA carries an extensive range of spare parts and stock items, to ensure our customers' production and farming operations are able to run without interruption, while PPA has also further expanded their technical team, both of which combine to ensure support for your farming operation is never far away.

We look forward to seeing all our existing and any new prospective customers at AVI Africa 2017.

Real Dosing Solutions brings a comprehensive solution for accurate water dosing and treatment to livestock producers in South Africa.

We supply peristaltic pumps, which not only keep the dosed product separate from the pump itself, but also separate from other products that have to be dosed through the same system. This protects the pump against corrosive products such as chlorine, acids and hydrogen peroxide, and keeps the dosed product uncontaminated.

Up-to-the-minute waterflow measurement and dosing straight from the original product container, make it possible to dose at close to perfectly accurate ratios even if the water pressure fluctuates.

These systems are digitally controlled, which means that they are simple to operate. They can be pre-set for single-shot, intermittent and proportional dosing. In addition, they provide feedback on exact flowrates, amount of product dosed and the period over which this has been done.

Simplify and improve your water treatment and dosing in practice.

Visit us at Stands 156 & 157.

We supply the entire range of layer, rearing, breeding and broiler equipment.

Our international agency agreements with Valli cages, Ziggity drinking systems, Pan feeders and silos, Nabel egg graders, Rotem controllers and Ventilation fans allow us to offer the poultry farmer a one-stop solution for any poultry application.

We pride ourselves on our innovative approach to any challenge. Our constant upgrading and improvement of our in-house facilities further demonstrates our commitment to you, the farmer.

Consistent above-average results achieved by our existing broiler clients are testament to the quality of our equipment.

We take great pleasure in watching our layer clients grow from a few hundred layers to a few thousand in a few short years; the sense of satisfaction and achievement is what drives our sales team.

Secucell specializes in the development and manufacturing of early warning risk solutions.

The company was founded in the year 2000 and has a track record of developing quality and reliable products in the GSM Security market interfacing security systems with everyday cell phone technology. The biggest market utilizing our products in the beginning was the agricultural, electrical and DIY security industry.

In 2010 the company spreads it wings and explore new market opportunities, this led to the development of products for a wider variety of industries, for example; Traffic accommodation lighting, Height restriction alarm systems and risk monitoring solutions interfaced with GSM based technology.

Research and development originate from different customers with different applications. With this approach towards industry Secucell develops turnkey solutions to simplify our customer's lives.

Our goal is to ensure that our customers would be satisfy with the service and the support they receive when utilizing our products.

Barry Seymour, in 1984 was advised by Roger Milson, GM of SA Philips, that SAPA had requested Philips to take a Stand at the SAPA Congress to be held at E mperors Palace.

Philips declined and recommended Barry Seymour in their stead. Barry has been in attendance every year (but for 1996/7).

He soon saw the need for a 5 000hr light bulb which was very popular and then in 1988 we moved on to our SEEMORELUX™ Classic 2xPL9 energy Saving Luminaire with 3 or 4 Step dimming.

Barry now offers the SEEMORELUX NATURAL™ HIGH FREQUENCY Luminaire saving up to 97% ESKOM compared to light bulbs.

Compared to LED's our HF system typically saves on: CAPITAL OUTLAY – MAINTENANCE COSTS – MAINTENANCE STOCK COSTS.

On running costs the LED may be on par.

SPECIAL NUTRIENTS, INC.
 THE MYCOTOXINS SPECIALIST

Special Nutrients, Inc. is a worldwide leading supplier of scientifically proven anti-mycotoxins additives produced in two production sites in the USA, with over fifty distributors located around the globe. For more than 25 years the company has offered reliable products supported by an excellent quality control and technical support team.

Mycoad and Mycoad AZ are the two main products manufactured and marketed by the company with both having the capacity to absorb and retain the most important mycotoxins affecting animal production.

This absorption from the gastrointestinal tract avoids the deleterious effects caused by these toxins in the body, without interfering with the absorption of critical nutrients present in the ration.

SUPER
AGRI
SCIENCE
LEADERS IN TOTAL PRODUCTION IMPROVEMENT

Super Agri Science supplies production improvement and pathogen reduction products to the Poultry and Food Processing Industries. All products are based on scientifically proven principles and treatment concepts.

The primary focus is on pathogen reduction, improving protein synthesis, protecting animal tissue from free radical damage, correcting pH and electrolyte balance, naturally suppressing inflammation, improving vascular systems through strengthening of the collagen tissues and boosting in vivo vitamin levels.

Our products are designed and manufactured in South Africa from quality food grade raw materials and plant extracts.

Our focus is on improving the direct environment of the bird on the farm by creating the optimum environment both internally and externally to be able to achieve optimal growth and feed conversion potential.

Our products enable the farmer and production managers to influence production positively on the farm.

For Total Production Improvement

Suntaq International Limited is a leading bio-engineer enterprise, specialized in development, manufacture and sales of industry, feed and food enzymes.

We are committed to connecting the enzyme technology and the industries by dedicating our maximum expertise.

A-1716A, Liwan Building, Qianhai Rd., Nanshan Dist., Shenzhen, 518000

Midrand Poultry Supplies Cc T/A Spartan Equipment

Spartan has served the South African poultry industry for many years. We have some of the world's best agencies and are able to offer you ALL YOUR POULTRY REQUIREMENTS.

Val Nipple Drinking Systems

The Big One! Our nipple drinking system has made a big impression on the industry and has helped to bring the broiler and layer industry to a situation competitive with the outside world. VALCO have become a household name and the quality of the product is a winner.

Choretime Automatic Feeding System and Ventilation Systems

These products have once again established itself as a leading player in the broiler and broiler-breeding market is SA. The new Chore-Time's Konavi Broiler Feeding system gets birds off to a good start, minimizes wasted feed and provides birds with consistent access to fresh feed. Choretime products have always been of the highest quality.

Weltech Control And Monitoring

Due to the ever increasing demands from the industry for more efficiency and better accuracy on bird body weight, feed control and house climate control, Weltech has worked closely with the industry to produce a complete range of equipment to suit individual needs. The totally portable scale with printout has proved to be very popular.

Petersime Incubators

A world leader in incubation process. The Petersime S-Line Bio Streamer using the Bio Response techniques is the current market leader in South Africa. The Bio Streamer and Conventional systems constantly out performs any alternative incubation system. Bio Streamer and Conventional system chicks hatch in bigger numbers and, even more importantly, they score significantly better on the quality scale: liveability, feed conversion and broiler yield attain previously unknown levels.

Tecno Poultry Equipment

Tecno Poultry Equipment has made great strides in supplying new equipment to the layer industry over the last few years. Egg production installations with the

Uniplus Universal layer cages from 3 to 10 tiers, as well as the Ideal Plus rearing cages, features belt cleaning facilities, with an optional manure-drying process that provides ventilation to manure conveyor belts. Speak to us about all our new installations – rearing and laying in the latest designed cages.

Meyn Poultry Processing Solution

Meyn Food Processing Technology is one of the world's leading designers and manufacturers of systems and equipment for the poultry processing and convenience food industries. Meyn's product range offers equipment and systems for broilers, culls, turkeys, high-speed automatic evisceration systems and fully automatic intelligent cut-up and deboning systems.

Vencomatic Automatic Egg Collection Systems

Vencomatic group can offer a complete product package. In addition to the well known line of products, nests, slats, and egg transport systems, Vencomatic can offer several aviary systems for layers, as well as the Veranda colony system for broiler breeders and the VBS multi-tier broiler system.

Prinzen Egg Handling Equipment

Prinzen has become one of the major players in the egg handling equipment industry. Prinzen is a specialist company offering solutions in egg handling equipment, from simple on-farming egg packers to complex egg and tray handling systems for hatchery applications.

**Technical
Systems**

MARKET LEADER IN
FEED CONVEYING

CELEBRATING 25 YEARS!!

Thank you to all stakeholders – from suppliers to customers – for their trust and support to Technical Systems since establishment.

VISION

It is our corporate vision to be the preferred manufacturer and supplier of feeding systems in the Global OEM livestock industry, providing consistent product quality and delivery.

INDUSTRY

Our products serve the animal husbandry industries such as, Poultry Layers, Broilers, Breeders; Pigs, Rabbits and Turkeys.

We are in the business to improve the feeding systems of distributing feed in these industries on a global scale, to become the market leader in feed distribution, by managing the markets needs with flexibility.

DISTRIBUTION

With an industrial presence in 55 countries across Europe, Middle East, the Americas, Australasia, Asia, China and Africa, Technical Systems has a balanced geographic diversity within all the key poultry and pig feeding markets, both developing and developed. Technical Systems is not only the sole manufacturer of chain and auger on the African continent, but the sole manufacturer of chain and auger products in the world, producing in excess of 14,500 km of chain and Auger per annum and employing 200 staff.

Strategically positioned international warehousing in The Netherlands, China and USA, ensures we adhere to the first to market principle.

OUR PRODUCTS

Feed Chain

Feed Chain is capable to distribute feed evenly, rapidly and reliably throughout any feeding configuration. Pan Auger & Flexible Cross Auger Conveyor - Fatigless

TM

Our product range consists of over 70 different models of Auger conveyors from Pipe diameter 45, 55, 75, 90,

108 & 125 mm, catering for pan auger feeding as well as Silo-to-House, Fatigless TM cross auger conveyors for bend applications

Fatigue capability (hence the branded name)

outperforms the best Auger in the world by far. It proved to be unbreakable in fatigue oscillator tests and outlasted 15 years in simulation tests.

Infini-T TM Auger

Infini-TTM Auger as the world's 1st continuous auger coil length in excess of 3,000 m / coil.

International Patent Application no: PCT/IB2016/051325.

Our customers save on scrap yields and maximising container volumes, saving transport cost.

Corner Unit

Designed for hard wearing, smooth and trouble free direction changes in the chain feeding system.

The 90° Corner Unit has a solid housing with a heat treated guide rail and a self-lubricating synthetic bush, to ensure a maintenance-free, smooth operation, even at high speeds.

The detachable plastic housing comes standard with our logo, but it is also available unmarked and can be custom branded for large/frequent orders.

Flattened Wire

Unlike many other manufacturers of Auger whom purchase flattened, heat treated wire, we heat treat and flatten our own wire.

This ensures the monitoring of all stages of the production process and ensuring correct hardness specification.

QUALITY SYSTEM

Technical Systems follows a quality management system on the principles of ISO standards, allowing a thorough quality control at various work stations.

Tradevet CC is a specialist marketing and distribution business based in Midrand, South Africa. We are the exclusive marketers of the avian vaccines from Boehringer Ingelheim Animal Health (BIAH) in South Africa. We also distribute a range of disinfectants, chemicals, antimicrobials, vitamins and other health promoting products to the poultry industry in this country.

The BIAH range of vaccines include well known brand names. Avinew, the market leading Newcastle disease vaccine, is now in its 21st year on the South African market. This product was improved to include an effervescent tablet presentation, Avinew Neo. Vaxxitek HVT&IBD™, the BIAH flagship product has sold more than 80 billion doses worldwide so far.

Our sales staff has extensive poultry experience as well as a sound knowledge of how and where to apply our products.

Our aim is to provide products that will contribute to flock performance, with due regard for public health.

The Poultry Nutrition and Management Research Group are situated within the Department of Animal and Wildlife Sciences of the University of Pretoria and consist of two faculty members and around 10 M.Sc. and Ph.D. students.

Our purpose is to train students and conduct applied research in areas of Poultry Nutrition, Incubation, and Broiler management to develop new knowledge for SA poultry producers and associated Industries that addresses specific regional challenges, and will help local producers remain competitive in a global economy.

To achieve this we have created strategic collaborations

with key international Poultry Science Research Centers and maintain close relations within the SA Poultry Industry. Identified focus areas for research include feed ingredient and feed additive evaluation, understanding effects of incubation conditions on embryonic development and broiler performance, and developing strategies to reduce leg problems and metabolic associated mortality in broilers reared at altitude.

By developing knowledge and new talent in poultry science we strive to contribute to the future success of our Industry.
